

Volcanic activity to Snowball Earth?

$$\frac{Q_{trans}}{4} S(x)(1 - \alpha(x)) = A + BT(x) + C(T(x) - \bar{T})$$

Optical Depth

$$\tau := \ln \left(\frac{Q_{trans}}{Q} \right)$$

Assumption:

Layer is thin, so
 $d_1 \approx d_z$.

Pinatubo (Self et al (1999))

- $20 \text{ Mt } [SO_2]$
- $\tau_{max} \approx 0.4$
- $\bar{\tau} \approx 0.1 \sim 0.15$
